

GIS ADD-ON FOR CONSTRUCTION PROJECT MANAGER

Mitchell Humphrey's GIS add-on for Construction Project Manager adds the tremendous benefit of mapping to your municipal processes. By making full use of existing ArcView® map data, the accuracy of these functions is greatly increased with a minimum of additional effort.

- View Municipality Maps – Use existing ArcView® data for integration with processes. The direct integration with ArcView® data allows you to view maps and any associated work being performed.
- View Map Layers – Combine map layers to get a complete picture of a municipality. Using all of the map data allows you to create a multi-layered map featuring all necessary information.
- Generate Key Letters – Letters are produced on a variety of criteria. Integration with other modules allows letters based on permit activity and geography.

PRODUCT FEATURES:

- Windows-based, easy-to-use, field-proven
- View maps of the municipality based on existing ArcView® data
- View various map layers including roads, flood zones, and sewer lines (based on existing data)
- Print all map layers, with accompanying notes if required
- View all related construction activity on a specific property
- Select a property range based on block and lot or street address with the ability to:
 - o View on a map
 - o Search surrounding properties by distance
 - o List all addresses within a specified area
 - o Generate and print letters to those addresses
