

Electronic Plan Review Management Software

e-PlanSoft integrates seamlessly with FastTrackGov® (FTG)

Provide instant, secure access to project documents and supporting materials 24/7 from any computer, anywhere in the world.

Features include:

- **Enhanced real-time team collaboration** – collaboration is made easier and more secure with flexible permissions and concurrent plan review
- **Specialized markup tools** – access the most common features including markup and secure stamping tools with a single click of the streamlined markup toolbar
- **Document versioning** – ensure that you're always working on the newest version and that all comments and markups carry forward, while still retaining read-only access to earlier iterations for review
- **Shared licenses** – provide comment access to project owners, architects, engineers, or other parties of interest to view and/or reply to comments for selected projects
- **Powerful comment management** – protect comments and sketches from unauthorized changes with our built-in security feature. Comments are saved directly into the database, instead of an unsecure text file or to the PDF document, so they are protected should the PDF file become compromised
- **Optical character recognition** – EPR automatically detects and extracts electronic document characters such as printed text and numbers. The data is then used digitally to scan or render the plan sets which is easily maintained in a database for access when using EPR

Contact your MH&Co. Project Manager with any questions and to implement e-PlanSoft.
